

# Meal Tracker® Multi-Lane Point of Sale

## Option 2: PC

Using the school's LAN, multiple PCs can be configured as serving units.

Allows you to take advantage of color and sound features of the PC.

Use with Touch-Screen Monitors, serving keyboards, or just the PC (no special hardware)!

With the falling prices of personal computers in recent years, coupled with the emergence of school building networks, serving from the PC is an attractive serving option for many schools.

Supports all input devices: hand-held scanner, PIN pad, or barcode slot reader.

### All the same features as option 1 (560T) PLUS these features:

- Touch-screen capable.
- Offer vs. Serve "traffic lights" help operators recognize potential opportunities for reimbursable meals — transactions that would otherwise be counted as a la carte.
- Display account pictures with each serving transaction. Instantly capture pictures at the serving line with your digital camera.
- Sound effects, including buzzers and bells alert operators to successful completion of transactions and exceptions (requires sound card in PC).
- Unlimited number of menu items/serving keys.
- Ability to access account history information.
- Add, edit or credit student information at the serving line.
- Transaction counter on screen shows total transactions and total meals served for each serving period.
- One-click access to all transaction detail for the day.
- Each serving period's screen is quickly recognizable by color.
